

ABSTRACT OF THE DISCLOSURE

A wheel structure of the electric wheelchair or the like comprises an axle, a brake device, and a wheel frame. The axle has an inner end which is fitted into an axle tube, and an outer end on which the brake device and the wheel frame are mounted. The brake device is formed of a brake seat, a brake shoe mounted on the brake seat, and an actuating rod mounted on the brake seat. The brake seat is provided with a tubular portion for locating the brake seat in such a way that the tubular portion is fitted over the axle tube. The brake seat is further located by a locating plate which is fastened at one end with the brake seat and at other end with a body frame of the electric wheelchair or the like.
